128 East Plant And Office Employees Donate A Unit Of Blood

More than 150 employees in East Plant departments and various offices were on hand to contribute blood at Doolittle Hall on Nov. 5th but, due to rejections for various reasons, only 128 units were taken.

Through cooperation of the local Red Cross, services of the Mobile Unit are made available for our Blood Donor Program.

A portion of the blood donated will go to wounded servicemen, the remainder to go to local hospitals for use by Scovillites and members of their family when needed.

Twelve Retirements

NELLIE MELLUZZO, Connector, was retired with benefits to start on September 21, 1953. She has 27.3 years of continuous service, and has served as a power press operator in Connector since 1936.

NARCISSE NORMAND, Tin Shop was retired from active service as of October 3, 1953.

Mr. Normand was hired in 1918 but, due to several periods away from the plant, his continuous service began in 1936. At the time of his retirement, he was serving as a sheet metal worker-working supervisor in the Tin Shop.

FRED ROMANKO, Sanitation, retired with benefits to start on October 26, 1953. With the Company continuously for over 31 years, he was serving as janitor in Sanitation at the time of his retirement. Prior to that, he was a trucker and floorman in the Wire Mill.

ANTHONY BECK, Rod Mill, was retired with benefits to start on November 1, 1953. He has 37 years of continuous Scovill service and has been employed as a pumpman in the Rod Mill since 1941.

WILLIAM BIRMINGHAM, Steam Department, retired with benefits to start on November 1, 1953. His over 36 years of continuous service were spent in the Steam Department where he has served as a coalman since 1951.

JOSEPH HENCH, Slide Fastener Tool, retired with benefits to start on November 1, 1953. Mr. Hench has over 35 years of continuous service during which time he has been employed in various departments. Since 1947, he has served as a Toolmaker in Slide Fastener Tool.

New Improved Zipper Announced By Scovill

A new and improved zipper is available now for women's foundation garments according to announcement by DeWitt Knotter, sales manager of our Zipper Division.

The new zipper employs a radical design in its locking piece, which eliminates all types of complaints women have voiced against this part of zippered foundation garments. Mr. Knotter said that the new slider is stronger than existing ones and at the same time is smaller and thinner.

The pull tab cannot be twisted off the slider no matter how much pres-

GREEN SPOT Line In West Coast Trade Show

Our GREEN SPOT line of garden hose watering accessories was shown to the dealers and wholesalers on the West Coast at a trade show held in the California Municipal Auditorium, Long Beach, Calif. October 27-29.

At this time, the complete 1954 GREEN SPOT product line was displayed and the merchandising theme for next year of water management was announced. The water management theme is a consumer education program of showing gardeners how to get the most effective use out of watering equipment.

School Delegation To Visit Scovill

Scovill will be the first establishment to be visited by members of the local public school system when a group of 35 administrators, principals and teachers tour the Continuous-Strip Mill on Wednesday, November 18.

The tour is in connection with the Business-Education Program for Waterbury, co-sponsored by the Board of Education and the Chamber of Commerce. It is the first of a number of similar field trips by teachers to industrial plants, banks, retail establishments, utilities and other service industries in the area. The program calls for teachers from different schools to visit these establishments on a plan to be worked out by the Board and the Chamber.

On Wednesday, November 18, the teachers will meet at the Scovill Girls' Club where they will be guests of the Company at luncheon. President L. P. Sperry and other top officials will act as hosts.

New Assignments Manufacturing Division

Announced by Factory Superintendent J. G. Wolff:

Effective November 2, 1953, W. Arthur Root has been appointed Foreman of the Lacquer Department, #25, reporting to Assistant Factory Superintendent R. E. Johnson.

Waterville Division

Announced by Vice-President and General Manager S. G. Gaillard, Jr.:

Effective November 1, 1953, Warren F. Bice has been appointed Manager of Industrial Fastener Sales at the Waterville Division.

Our Jobs Depend On Human Relations

What one does and says to others is generally the basis on which people form opinions of one another. When our words and actions are good, we make friends. When they are the reverse, we lose friends and make enemies. Quite often the actions of one person have an effect on people working with and around this person.

An individual who is habitually grouching, finding fault, and walking around with a chip on his shoulder is his own worst enemy. A cantankerous individual can destroy the morale of his fellow workers.

The attitude of workers towards their job can be measured in the product they turn out. The interested, happy and conscientious worker takes pride in his job and is continually striving to turn out the best possible product. On the other hand, the discontented worker shows up with sloppy products and poor workmanship. His disinterested attitude costs money through rejects and waste which in turn reduces the earning capacity of workers who are trying to turn out a fair day's work for a fair day's wage.

So long as we can continue to supply quality products at competitive prices in quantities sufficient to meet consumer demand, we shall continue to prosper and grow. All of us have a stake in doing the best possible job we can, as the over-all success of our Company, and hence our jobs depend upon the work turned out by each and every one of us.

Alan C. Curtiss
Vice-President

Side Line Quarterbacks

It seems to be an American custom that side line spectators believe they can run a show better than the ones who are doing it. As an example, the next time you watch a sporting event, see how often you are planning the next play or the next move, or are critical of what is being done. It seems that those who sit on the side lines always have the answer.

From where we sit the answer is always apparent, even though it may not be the right one. That same attitude is carried over into many other phases of our daily life. How often do you hear the expression, "Now if I was doing that, I'd . . ." What we overlook is the very simple fact that the people who are calling the shots are there because they have proven their worth through experience, trial and error. And, being in that position, they necessarily have information which is not known on the side lines.

At the same time no one is complete master of any given situation. All of us can draw on our personal experiences and our imagination for suggestions that can prove useful. These make for *constructive* criticism which can be rewarding to all concerned. They can take us off the side lines and put us into the game for at least a play.

Retired Folks View Color Slides On Alaska

Thirty-five members of our Retired Folks' Club enjoyed a "trip to Alaska" at their meeting in the SERA Clubhouse on Tuesday, November 10.

The "trip" was taken through the beautiful color slides and pleasing commentary of Felix L. Matheus who took the pictures on a trip to Alaska this past summer. Additional comments were made by Howard Wright who accompanied Mr. Matheus on the trip.

The next meeting of the group is scheduled for December 8th. Notices will go out in the regular manner.

Tin Shop Plans For New Year's Eve Party

It may sound a bit early but the committee in charge of the Tin Shop's eighth annual New Year's Eve party wishes to advise all interested to get their tickets early. Reservations are limited to 100 couples and tickets are being sold on a first-come, first-served basis.

Joe Rock and his ten-piece orchestra will furnish music for dancing from 9 p.m. to 2 a.m. The place, Doolittle Hall.

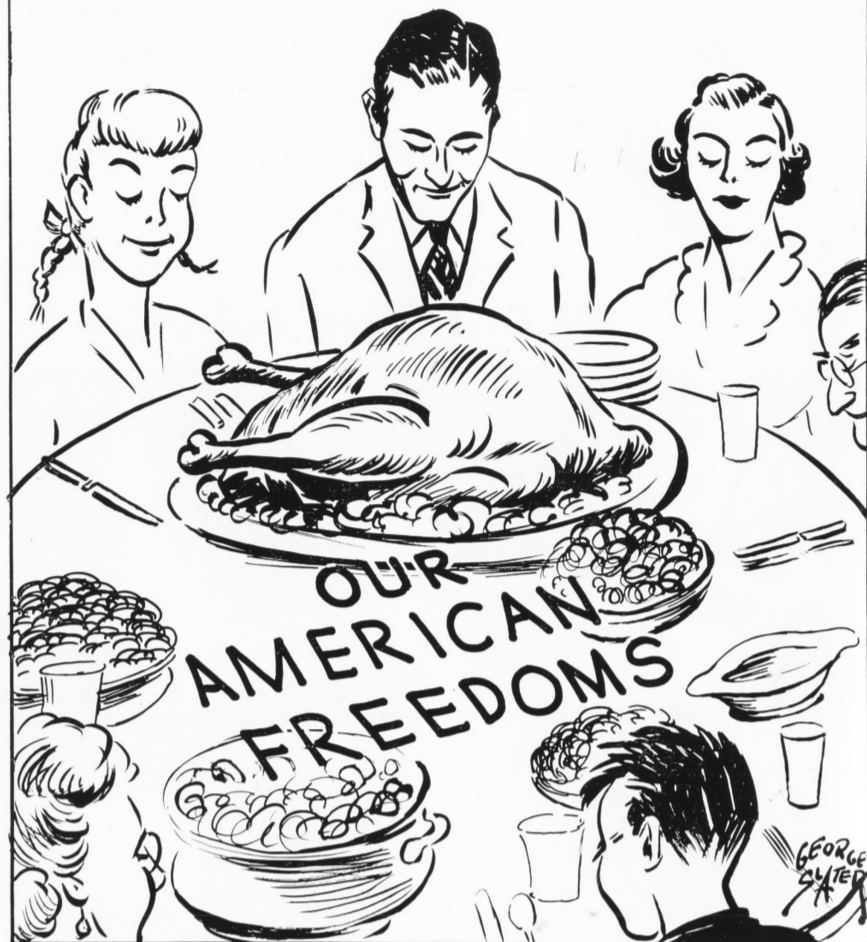

The committee consists of: John Capone, Art Graveline, Hector LaRiviere, and Ernest Sherman.

Slide Fastener Tool Honors Joe Hench

"Good luck and happy retirement" were the sentiments expressed by co-workers and friends of Joe Hench (Slide Fastener Tool) who has retired after over 35 years of Scovill service. Slide Fastener General Superintendent Milton Bristol presents Joe (see photo) a purse on behalf of the group.

WE GIVE THANKS!

Don't Blow A Gasket!

By Robert W. Butler, M.D.

There's no reason why you should if you keep your blood pressure under control. First, of course, you are not likely to know whether it is or not unless you have it taken once in a while. Don't wait to have it checked until you have headaches, dizzy spells, or other symptoms which you associate with blood pressure because if you do, the condition may have been present for years, and have already done a lot of damage. You'd be surprised at the number of people we see whose pressure is flirting with the 200 mark who have no symptoms — and they didn't get that way over night!

In the last issue we explained the circulation's pumping system, the pump (heart) and pipes (blood vessels). Several things will cause an increase in pressure, one of the most important being an increase in the resistance against which the pumps must work. If you are going to pump 100 gallons of water through a 1" pipe in one minute, it will take less pressure by the pump than it would to push the same amount through a 1/2" pipe in the same length of time. As people grow older, changes take place in their blood vessels, and the openings become smaller — not merely in those which can be felt under the skin, but those in all various organs as well. As the pipes become smaller with these changes, the pressure becomes greater. The two don't go along hand in hand usually, and the changes in vessels and pressure don't take place at the same rate. Also, there is no specific age at which the arteries become smaller — some men of 30 have harder arteries than others at 60.

Let us hasten to add that the problem of high blood pressure is not as simple as this discussion would seem to make it. Many other conditions which increase the resistance to the flow of blood will increase the pressure, and there's a great deal that we don't know about it. However, it is obvious that, if the pressure is too

high or too long, the added work which the heart must do to keep you going is bound to have its effect. You can't whip the horse forever and get away with it.

The important thing to know is that in most cases it can be kept under control. How that is to be done depends upon the kind, the cause, and how long it has been going on. The word, you'll notice, is *control* — not cure. Many cases can be cured, but many cannot be; so if you take treatment for it, and after a time your doctor tells you that your pressure is back to where he wants it, don't get the idea that that's it. He'll want to see you again; and don't ever stop treatment until he tells you you may. Stop the treatment sooner than you should and your pressure will be right back where it was when you started.

But how are you going to know whether or not you need treatment if you don't have it checked?

New Improved Zipper

(Continued from Page 1, Column 2)

sure a wearer exerts on it. Laundering will not do any damage to the Scovill zipper because of the new slider construction.

Among the other advantages of the new zipper is that it has a smoother operation, can be opened and closed more easily under strain, and it has a lacquered finish to match the garment's color, which will keep its finish longer than any other zipper on the market.

School Delegation

(Continued from Page 1, Column 4)

Following luncheon, the group will be taken through the Continuous-Strip Mill. Later, they will assemble in the display room which contains typical products from our various manufacturing departments and divisions.

Among the Scovill officials to talk to the group about various aspects of the brass industry will be: executive vice-president W. M. Goss, vice-presidents: A. C. Curtiss, industrial and employee relations; C. P. Goss, mill sales; P. E. Fenton, manufacturing sales; H. W. Wild, manufacturing; treasurer M. L. Sperry, 2nd; and mill works manager J. J. Hoben.

The subjects to be covered include sales, personnel, production, finance, transportation, competition.

Pinochle Tournament

With pinochle under way for several weeks now, we find Bill Mancini's men leading the tourney with 126,980 points as of November 5. John Matulunas' boys are second with 125,360, and Erv Honyotski's are third with 122,440.

For that evening, John Matulunas' team totaled 25,950, Erv Honyotski's—24,800 and Bill Mancini's—23,835.

John Matulunas was high man for the night with 4,525. Ed Mitchell had second high score, 4,220.

Retirements

(Continued from Page 1, Column 1)

WILLIAM HOWARD, ASM Tool, retired with benefits to start on November 1, 1953. He has over 31 years of continuous service. He has been employed as a machinist-maintenance in ASM Tool since 1935.

FRANK HOWD, Milling & Grinding, was retired with benefits to start on November 1, 1953. He has over 37 years of continuous service, most of which were spent in the Milling & Grinding Room as a grinder.

GAETANO MACCHIARELLA, Waterville, retired with benefits to start on November 1, 1953. Mr. Macchiarella has 30 years of continuous service and was a group leader in the Waterville Division Shipping Department at the time of his retirement.

URBANO MORI, Carpenter Shop, was retired with benefits to start on November 1, 1953. Except for a couple of months in the Wire Mill, all of his 27.3 years of continuous service were spent in the Carpenter Shop. At the time of his retirement, he was employed as a boxmaker.

NUNZIO MURNO, Tin Shop, retired with benefits to start on November 1, 1953. With the Company continuously for over 30 years, he has served as a tool crib attendant in the Tin Shop since 1944.

JOHN STEPONAITIS, Chucking, was retired with benefits to start on November 1, 1953. His over 32 years of continuous service were spent in various departments, the last being Chucking where he has served as a cleaning machine operator since 1943.

Fishing Notes

By Jim Littlejohn

On Sunday, November 1, the 1953 fishing season came to a close at Woodtick. The annual fishermen's banquet was held on Thursday, November 5, with Charles Rietydyke as Toastmaster and Francis T. Reeves as principal speaker.

Prizes won in the Rod & Gun Club and Reeves contests were presented to the winners. Principal winner and champion for 1953 was Chris Delaney of the Trucking Department. He also won the door prize which was a handsome electric alarm clock. Wonder if he had his four-leaf Shamrock with him? He also received a fine portrait of himself and a catfish which was drawn by George Slater of the BULLETIN staff.

Have you seen the new boat dock at Woodtick? It is a big improvement and should be a big saving on our boats as all the rocks have been removed and replaced with a nice sandy beach. Take a run out and give us your reaction.

"Scoops" From Zippers

By Louise Foell

The first November baby in Slide Fastener is a cute little Irish lass who is called Patricia Ann. Frank Greaney is the proud papa.

Reserve December 12 as that will be the date of our Christmas Party, to be held at Doolittle Hall. Those on the committee are: D. Taylor, H. McGhee, N. Tuohy, E. Konopaske, J. Carey, T. Ryan, J. Thompson, S. Phelan, L. Foell, B. Weidinger, A. Andrews, B. Ross, T. Cullinan, J. Fabey, H. Colby, P. Tariataglia, G. Swirida, A. Montville, H. Koby, E. Huckins.

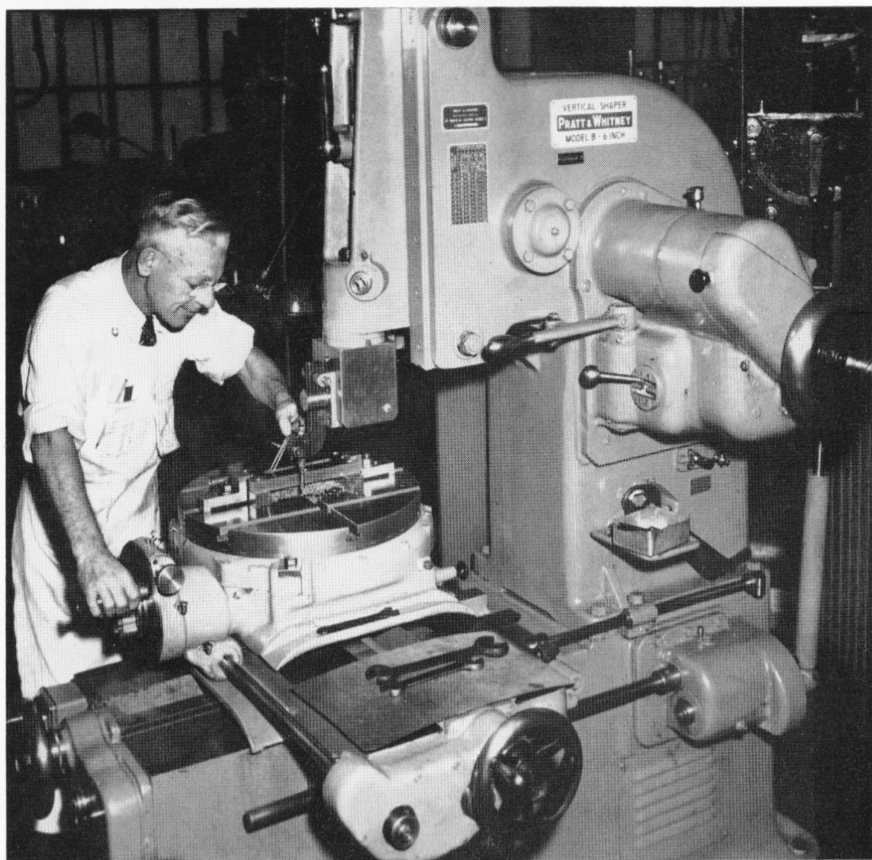

Happy anniversary to Helen Andreano who is celebrating in the "big city".

Our employees seem to have athletic children. Another Crosby football star is Al Gyllenhammer who is the son of Judy of Slide Fastener Salvage.

Any Slide Fastener employees need Christmas cards? Stop and see our display in Slide Fastener Packing.

Heard that Ann Verbiskey's lovely daughter is a very active Girl Scout.

New Equipment In Milling & Grinding

Edward Scovill, of Milling & Grinding, measures a piece of work for accuracy before removing it from the new Vertical Shaper.

Among the latest equipment to be installed in the Milling & Grinding Department is a Vertical Shaper, or Slotting Machine, which was built by Pratt & Whitney, Division of Niles-Bement-Pond.

Its principal use is to cut irregular shaped holes in dies, but is used also for cutting keyways and machining parts which require square corners. It may be used for cutting teeth not only in round but in irregular shaped internal gears.

A piece of work to be slotted is clamped directly to the horizontal table or to the rotary fixture and the machining is done by an up and down motion of the ram. The operator controls the feed table which produces a desired shape and dimensions. Four speeds are used to control the degree of finish required. The slow speeds

are used for roughing, while the high speeds are used for finishing cuts.

The ram has a quick return action and may be set at a slight angle to produce die clearance. It may be indexed 360° and locked in position.

The rotary table is graduated so that, if a piece of work requires more than one hole to be slotted, it can be done with fine accuracy. This often allows a part to be finished in one setting, instead of several operations.

All controls are within easy reach of the operator so that he has complete control without moving from the front of the machine. He can watch the progress of the tool biting through the work, and he can control it with the slightest pressure of his hand.

The Vertical Shaper shows a saving on all jobs, because it frequently eliminates expensive fixtures, and because more often than not, the entire job can be done without change in setup.

Life Out East

By Harry Shewbridge

A week or so ago I stayed out of work for a couple of days. Upon my return, I found the following note on my desk. "Miss Grab, your special envoy for news in the Tube Mill, was out of work also yesterday. There is a rumor that both of you took the day off to get some special news. Is there any truth to the above statement?" My only reply is that Edith and I deny nothing nor did we do anything we are ashamed of. So there!

There is no denying, however, that Margaret Dwyer enjoyed her vacation from the East Hospital. Margaret went out to Chicago to visit relatives and friends and enjoyed every minute of it. OK, Margaret, now back to work.

Ted Karklin of ASM Tool is back from his vacation too. Ted spent most of his time moving into his new home in Cheshire. They say it's a beautiful home, done to suit the good taste of Ted and his wife, and for them it's a dream come true. I've got news for you, though, Ted. We don't get a dozen channels on our TV sets out that way. You can't have everything!

Speaking of ASMD, I understand that the girls in ASM Packing caught Ray Murphy in a charitable mood and Ray offered to treat them. Without any regard for expense and with reckless abandon, Ray presented to the girls a bottle of coke and three straws. As Ray says, "Nothing is too good for my friends."

Finally, the Monday morning analysis of the first snowstorm of the year seems to be that he who drives must wait or walk and he who walks gets home for supper.

Pallets And Injuries

Here's an illustration of how accidents have happened when pallets fell unexpectedly onto someone.

Almost every department uses pallets for transporting material. This picture shows a pallet which was placed on edge — the wrong thing to do.

Pallets should not be placed on edge or leaned against posts or piles of work. Keep them flat on the floor — but not in aisles or passways.

Scovill Kids Celebrate Hallowe'en At Doolittle Hall

Around 300 children attended the SERA's annual Hallowe'en Party at Doolittle Hall on Friday, October 30.

Top right photo shows part of the group getting assembled for the Grand March. Winners of the costume prizes are pictured at the lower right.

Lower left:—Largest family representation at the party were the eight grandchildren of Clarence Budd of Milling & Grinding (a Scovillite for 43 years). They were: Signe Ericson, Tom Demarest, Richard Demarest, Billy Ericson, Mary Ellen Budd, Beverly Ann Fredin, Nathaniel Ericson and Donald Budd. Three won prizes.

Two Succumb

RUPPERT GODDEN, retired, died on October 29, 1953, in Toronto, Canada, after a long illness.

Mr. Godden came to Scovill's Purchasing Department in January, 1920. Two years later, he was transferred to Chicago Sales Office to handle Screw Sales. In 1924 he was transferred to the Brass Mill Products Division, retiring on May 1, 1946.

EDWARD J. DALY, ASMD, died on November 5, 1953.

Mr. Daly was hired in 1916, and had a continuous service record since 1944. He had served as a floorman in ASMD from November 19, 1951 until March of 1952, when he was forced to leave because of illness.

Cribbage Doings

As of November 10, the American League was leading by 323 points. Individual high for that night was taken by Erv Honyotski and Henry Strokalitis who totaled 1405. Earl Odell holds individual high of the tourney to date with 6657.

By Louise Foell

Being right in between activities, with little to report at present, we're going to take this opportunity to pass along to you a poem composed by one of our members.

SECRET TO A GOOD TIME

- Take time to live—
For tomorrow ended last night.
- Take time to love—
For hatred is destroying the world.
- Take time to labor—
For night cometh, when no man can work.
- Take time to rest—
For relaxation in season strengthens life.
- Take time to think—
For meditation keeps values in perspective.
- Take time to laugh—
For a merry heart doeth good like medicine.
- Take time to study—
For he who reads, leads.
- Take time to pray—
For it is in the path to peace.
- Take time to God—
For it is the only guarantee of happiness.
